SAS® + Posit: The Hybrid Advantage

Unify your Governance with your Innovation

The Siloed Lab: The 'Core' team runs critical models on SAS® for governance and reliability.

The 'Innovation' team runs R and Python for experimental flexibility.

These silos create data friction, duplicated efforts, and fragmented insights.

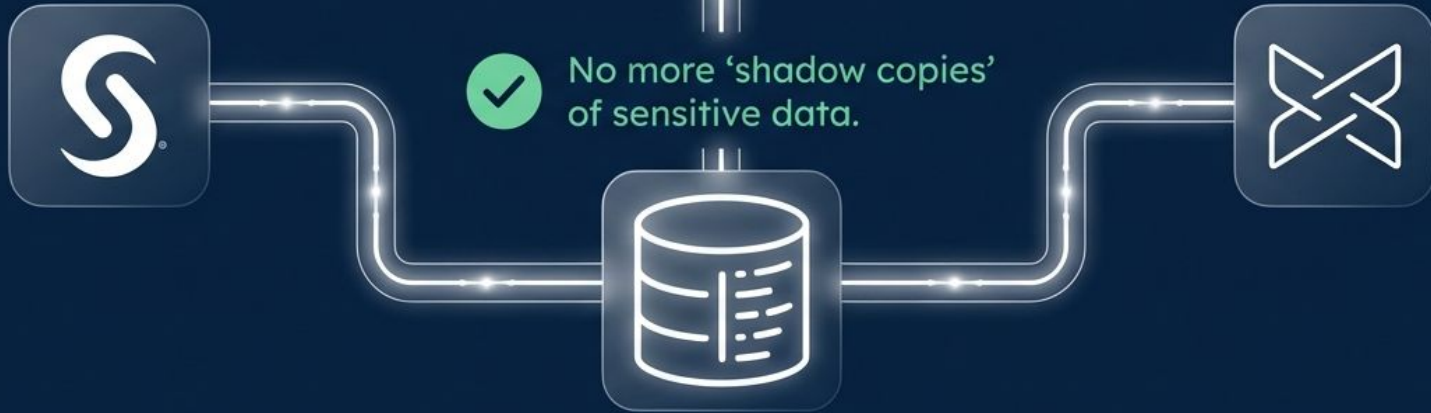

Bridge the Gap

Selerity brings these worlds together. As a Gold Partner for SAS and a Professional Services Partner for Posit, we architect environments where SAS and Open Source don't just co-exist—they collaborate.

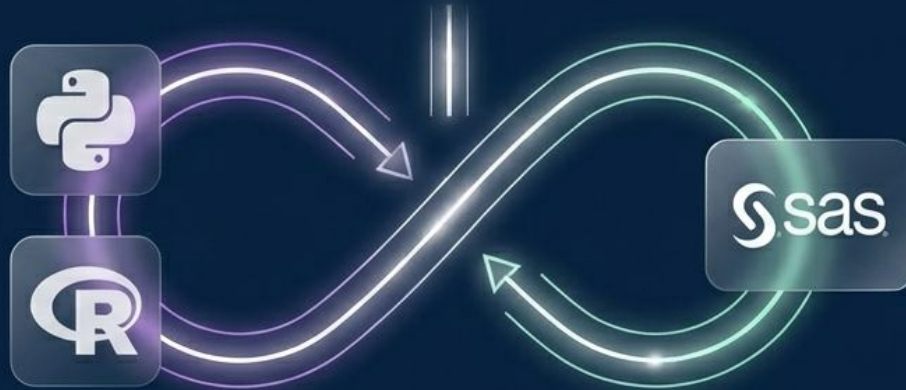

1. Unified Data Access

Configure SAS® Viya® and Posit Workbench to query the same governed data sources.

2. Model Interchange

Develop in Python/R on Posit, validate and deploy in SAS for regulatory reporting. Or vice versa.

Flexible development meets **rigid validation**.

3. Single Pane of Glass

Selerity manages the underlying infrastructure
for *both* platforms under a single SLA.

One number to call for support, regardless of the language.

The Selerity Difference

Preserve Your Investment.

Keep your trusted, validated SAS models running securely.

Expand Your Capability.

Attract new talent who prefer R/Python without compromising on enterprise security.

One Partner.

We simplify the complexity of multi-vendor environments.

Ready to break down the silos?
